

JEEVS SECURITY PROTOCOL

Investment Memo — Seed Round

Company: Agentic Insights LLC

Project: AgenticBro → Jeevs Security Protocol

Website: agenticbro.app

Chain: Solana

Stage: Pre-seed / Seed

Raise: \$500,000

Founder: Earl Finney Jr.

Date: May 2026

Prepared for: EV3 (Escape Velocity Ventures)

Salvador Gala & Mahesh Ramakrishnan, General Partners

THE PROBLEM

\$1.1B+ stolen through social engineering in crypto in 2025. \$8.8B+ lost to phone scams in the US alone (FTC 2024). On-chain tools catch <3% of this because scammers don't hack blockchains — they hack people.

Fake influencers on X. Phishing websites. Impersonation phone calls. Rug-pull tokens. Romance scams. Pig-butcherings. Wallet drainers.

The entire social engineering attack surface is invisible to Chainalysis, CertiK, and every on-chain analytics tool. They see the blockchain. They don't see the person getting scammed.

What On-Chain Tools Miss

Attack Vector	On-Chain Tools	Jeevs
Fake influencer promotions	Can't see	Chrome CDP scan
Phone impersonation scams	Can't see	12-flag phone scoring
Phishing websites	Can't see	Multi-source deep scan
Token impersonation	Partial	DexScreener + on-chain
Wallet drainer connections	Can't see	Transfer pattern analysis
Romance/pig-butcherings	Can't see	Profile behavioral AI

THE PRODUCT (SHIPPING TODAY)

AgenticBro v2.3 is live, deployed, and protecting users. Built solo by one engineer, nights and weekends, zero funding.

7 Scan Surfaces

#	Scanner	What It Detects
1	Social Profile Scanner	Fake influencers, impersonation, bots (X, IG, TikTok, FB, LinkedIn, Telegram)
2	Phone Identifier	12 risk flags, 90-point scoring, VOIP/spoofed detection
3	Token Scanner	Honeypots, high-tax tokens, rug-pull contracts
4	Website Deep Scanner	Phishing, malware, fake dApps, wallet drainers
5	Airdrop Scanner	Fake airdrops, wallet-draining airdrops
6	Wallet Transfer Scanner	Real-time Solana transaction risk analysis
7	Event Ticket Fraud Scanner	Fake event/ticket scams

Performance Metrics

Metric	Value
Scammers Indexed	261+ (49% growth since v2.1)
Scan Surfaces	7
Tests Passing	85+
CDP Extraction Accuracy	95%+
Profile Scan Latency	~15 seconds
False Positive Rate	~8%
Rug Pull Pre-Detection	71%
Campaigns Tracked	340+ per node
Time to First Alert	<22 minutes
DB Growth (v2.1→v2.3)	+49%

Wallet Protection: <https://youtube.com/shorts/qtZODapspz0>

WHY THIS IS DEPIN — NOT SAAS

Jeev's runs on Mac Studio nodes with local Ollama inference. Zero OpenAI dependency. Zero API rental. Fixed hardware cost, 98%+ gross margins.

DePIN Architecture

JEEV'S SECURITY PROTOCOL			
ABIG (AgenticBro Intelligence Graph)			
Shared threat intelligence across all nodes			
Worker	Worker	Worker	Validator
Node 1	Node 2	Node 3	Nodes
(Mac	(Mac	(Mac	(Stake 10K
Studio)	Studio)	Studio)	\$JEEV'S)
Solana Blockchain			
\$JEEV'S Token * Staking * Fee Distribution			

- Worker nodes stake 50K \$JEEV'S and process scans locally
- Validator nodes stake 10K \$JEEV'S, verify results, earn protocol fees
- ABIG shares threat intelligence across all nodes — more nodes = better intelligence
- 30% of a la carte fees burned — deflationary by design
- \$100 \$JEEV'S held = 50 scans/month — demand-gated access, not vapor

Network effects are structural: More nodes → faster scans → better data → more users → more fees → more node operators → more nodes.

THE EVOLUTION: PRODUCT → PROTOCOL

Aspect	AgenticBro (Today)	Jeev's Protocol (Funded)
What it is	Scam detection app	Decentralized security network
Revenue	SaaS + token-gated	Protocol fees + node incentives + enterprise
Moat	Data + accuracy	Network effects + sovereign inference
Valuation	Feature product (~\$5-10M)	Infrastructure layer (~\$50-200M)

AgenticBro is the product that proves PMF. Jeev's Protocol is the infrastructure it becomes with funding. The product works today. The protocol is the scale play.

MARKET OPPORTUNITY

Market	Size	Growth
Crypto scam losses (2025)	\$1.1B+	+1400% AI scam YoY
US phone scams (FTC 2024)	\$8.8B+	Growing 25% YoY
DePIN market cap	\$50B+	60% on Solana
Cybersecurity AI (2028)	\$135B	CAGR 24%

Key insight: AI scams extract \$3.2M per incident vs \$719K without AI (FBI 2024). The problem is accelerating, and on-chain tools can't see it. We can.

COMPETITIVE LANDSCAPE

Company	Funding	What They Do	Our Edge
Chainalysis	\$536M	On-chain analytics (B2B)	We see the human layer
Sardine	\$52M	Fraud prevention (API)	DePIN + local inference
CertiK	\$370M	Smart contract audits	We detect social eng.

Our moat: Physical Mac Studio nodes running local inference = sovereign DePIN infrastructure. Not rent-seeking on OpenAI. Not blockchain analytics. Consumer-facing protection across 7 surfaces that on-chain tools literally cannot see.

TEAM

Earl Finney Jr. — Founder, Agentic Insights LLC

- Systems Design Engineer, AT&T (enterprise infrastructure, 99.999% uptime systems)
- B.S. Electrical Engineering, Boston University
- Built AgenticBro solo, nights and weekends, zero funding
- 261+ scammers indexed, 85+ tests, 7 scan surfaces — all shipped

Seed round = full-time commitment + 2-3 hires (protocol engineer, ML engineer, community lead).

USE OF FUNDS (\$500K)

Allocation	Amount	Purpose
\$JEEEVs Liquidity	\$150K	OpenBook listing, LP seeding, burn
Node Farm	\$200K	10+ Mac Studio nodes, hosting, DePIN scaling
Browser Extension	\$100K	Chrome Safe Browse, Q3 2026
Operations	\$50K	Legal, marketing, runway

WHY EV3

1. Sal wrote the DePIN report.
You defined this investment category. We're building DePIN security infrastructure — the exact thesis you published.
2. Portfolio fit.
You invested in Opacity (identity), Unlink (privacy), MachineFi (DePIN). Security is the missing piece in your portfolio, and we fill it.
3. 60% of DePIN token market cap is on Solana.
(Your own thesis.) Those projects and their users need protection. We provide it.
4. We ship.
261+ scammers indexed, 7 surfaces, 85+ tests — all solo, all nights and weekends. Imagine what we do with \$500K and full-time focus.
5. Sovereign inference, not API wrappers.
Mac Studio nodes running local Ollama. Fixed cost, 98%+ margins. This is the DePIN hardware thesis applied to security.
